Contents

Section	Page
1. Domains, DNS and registration data	3
2. Digital certificates, TLS, Wi-Fi and device manufacturers	5
3. IP ownership, routing and attack surface management	7
4. Attack technique references and defensive study	9
5. Code, open-source projects and APIs	11
6. Website information and archival search	15
7. Finding and checking email addresses	17
8. Image search and analysis	20
9. Phone numbers: accuracy and coverage limitations	22
10. General search engines	24

1. Domains, DNS and registration data

DomainIQ

Research domains and IP addresses using collected and historical data.

<https://www.domainiq.com/>

Who.is

Check domain registration data through WHOIS and RDAP, including DNS and name servers.

<https://who.is/>

Whoisology

An archive of WHOIS data for investigating domain history and relationships; older records may not reflect the current situation.

<https://whoisology.com/>

WhoisXML API

WHOIS, DNS, domain and IP APIs for research and automation.

<https://www.whoisxmlapi.com/>

SpyOnWeb

Find possible connections between websites through shared technical attributes; a shared attribute does not prove common ownership.

<https://spyonweb.net/>

SynapsInt

Search domains, IP addresses, ASNs, SSL data and email addresses in one interface.

<https://synapsint.com/>

C99 API

APIs for technical lookups and utilities; features and quotas depend on the chosen service.

<https://api.c99.nl/>

2. Digital certificates, TLS, Wi-Fi and device manufacturers

crt.sh

Search certificates by domain, organization or fingerprint; useful for Certificate Transparency research.

<https://crt.sh/>

Cert Spotter

Monitor certificates issued for a domain and identify certificate security or availability problems.

<https://sslmate.com/certspotter/>

CipherSuite.info

A searchable reference for TLS cipher suites and their security properties.

<https://ciphersuite.info/>

Certs.io

Search TLS certificates to discover assets related to a domain or organization; account functionality was not tested in the source report.

<https://certs.io/>

WiGLE

Collect and map observations of wireless networks; this is not a list of networks that you are authorized to join.

<https://wigle.net/>

WiFi Map

Find Wi-Fi hotspots; mainly useful for connectivity and travel rather than specialist security analysis.

<https://www.wifimap.io/>

OpenWiFiMap

An open-source mapping project for community wireless networks such as Freifunk.

<https://openwifimap.net/>

MACVendors

Identify the registered manufacturer of a MAC address range using IEEE data.

<https://macvendors.com/>

MACAddress.io

Look up manufacturers and MAC block details, with an API suitable for network scripts.

<https://macaddress.io/>

MACLookup

Look up a manufacturer using a MAC address or OUI; useful for initial device checks.

<https://maclookup.app/>

MACVendorLookup

Match MAC addresses to registered manufacturer information.

<https://www.macvendorlookup.com/>

3. IP ownership, routing and attack surface management

FullHunt

Discover and monitor an organization's internet-facing assets for attack surface management.

<https://fullhunt.io/>

RedHunt Labs

Identify external assets and security risks through continuous monitoring.

<https://redhuntlabs.com/>

Deepinfo

Manage threat exposure and assess external assets and risks.

<https://www.deepinfo.com/>

IPinfo

IP, network and approximate location data for log enrichment and identifying network providers.

<https://ipinfo.io/>

ipdata

An API for IP location and attributes, supporting analysis, filtering and automation.

<https://ipdata.co/>

NetworksDB

Investigate relationships between companies, IP ranges, domains and network data.

<https://networksdb.io/>

BGP.tools

Inspect ASNs, IP prefixes and routing relationships; useful for learning and troubleshooting BGP.

<https://bgp.tools/>

BigDataCloud

APIs for approximate IP geolocation and geographic and network data.

<https://www.bigdatacloud.com/>

RADb

An internet routing registry for examining route objects and registered policies.

<https://www.radb.net/>

Cloudflare Radar

Observe large-scale trends in internet traffic, outages, attacks and technologies.

<https://radar.cloudflare.com/>

Pentest-Tools

Penetration testing and scanning tools for assessing assets covered by authorization.

<https://pentest-tools.com/>

4. Attack technique references and defensive study

These are mainly research and learning references, not general-purpose search engines.

Hacking the Cloud

An encyclopedia of offensive cloud security techniques for understanding configuration risks.

<https://hackingthe.cloud/>

LOLDrivers

Information about vulnerable or malicious Windows drivers for research and detection rule development.

<https://www.loldrivers.io/>

LOOBins

Misuse techniques involving built-in macOS tools, for behavioral analysis and defense.

<https://loobins.io/>

WADComs

A reference for Windows and Active Directory assessment tools and commands in authorized tests.

<https://wadcoms.github.io/>

Living Off the Pipeline

Documentation of possible misuse of CI/CD tools, supporting development pipeline security.

<https://boostsecurityio.github.io/lotp/>

LOLAPPS

A list of ordinary applications whose capabilities may be misused in attacks.

<https://lolapps-project.github.io/>

LOTHardware

A catalog of attack-related hardware, including USB and HID tools.

<https://lothardware.com.tr/>

CVExploits

Find exploit resources associated with CVEs; results must be matched to the actual version and conditions.

<https://cvexploits.io/>

Exploit Observer

Aggregates vulnerability and exploit information and provides an API; the source report did not verify the claim that it is the largest.

<https://www.exploit.observer/>

Coalition Exploit Scoring System

Scores the probability of vulnerability exploitation to support prioritization.

<https://ess.coalitioninc.com/>

5. Code, open-source projects and APIs

GitHub Code Search

Search code, functions and implementation examples in accessible repositories.

<https://github.com/search?type=code>

GitLab

Host projects and search repository code and content; features depend on settings and the plan.

<https://gitlab.com/>

grep.app

Search text and code snippets in public repositories to find examples of function usage.

<https://grep.app/>

Sourcegraph

Search and understand code across projects and repositories for development and software analysis.

<https://sourcegraph.com/>

Searchcode

Repository analysis and code search, with APIs and MCP for programming assistants.

<https://searchcode.com/>

PublicWWW

Search text within web page source code to find shared technologies or code snippets.

<https://publicwww.com/>

NerdyData

Identify websites that use specific technologies by examining their web code.

<https://www.nerdydata.com/>

Veloria (formerly WP Directory)

Search WordPress code for research into plugins and themes.

<https://veloria.dev/>

GitHub Gist

Publish and search code snippets, technical notes and short scripts.

<https://gist.github.com/>

SourceForge

Host and discover projects and software; each project should be evaluated separately.

<https://sourceforge.net/>

Codeberg

A collaboration and Git hosting platform for open-source projects.

<https://codeberg.org/>

Launchpad

Development hosting, bug reporting and project collaboration, especially in the Ubuntu ecosystem.

<https://launchpad.net/>

SourceHut

A suite of software development hosting and collaboration tools.

<https://sourcehut.org/>

Android Open Source

Official Android code repositories for studying the operating system and its components.

<https://android.googlesource.com/>

deps.dev

Information about open-source packages and dependencies for understanding the software supply chain.

<https://deps.dev/>

ecosyste.ms

Data and APIs covering open-source projects, packages and dependencies.

<https://ecosyste.ms/>

Postman Explore

Discover APIs and public request collections for practicing API usage and automation.

<https://www.postman.com/explore>

Swagger

Tools for designing, documenting and testing APIs.

<https://swagger.io/product/>

HotExamples

Code examples for study; an example you find is not necessarily secure or up to date.

<https://hotexamples.com/>

Snipplr

A code snippet sharing repository; examples require a quality review.

<https://snipplr.com/>

Google Code Archive

A historical archive of Google Code projects, not an active hosting service for new projects.

<https://code.google.com/archive/>

6. Website information and archival search

Intelligence X

Search domains, email addresses, IP addresses and other identifiers in archives and collected datasets.

<https://intelx.io/>

Phonebook.cz

Find domains, email addresses and URLs related to a domain; the source report states that a paid license is required.

<https://phonebook.cz/>

Common Crawl Index

Search the Common Crawl URL index to investigate historical traces on the web.

<https://index.commoncrawl.org/>

BuiltWith

Identify website technologies, such as content management systems and analytics tools.

<https://builtwith.com/>

Netcraft Site Report

Reports on a website's technology and hosting infrastructure.

<https://sitereport.netcraft.com/>

GrayhatWarfare - Buckets

Search cloud storage resources visible on the internet.

<https://buckets.grayhatwarfare.com/>

GrayhatWarfare - Shorteners

Search URLs collected from link shortening services.

<https://shorteners.grayhatwarfare.com/>

Similarweb

Analyze and estimate website traffic and competitive position; figures are not necessarily direct data from the site owner.

<https://www.similarweb.com/>

HypeStat

Website statistics and analysis, mainly for web research and marketing.

<https://hypestat.com/>

StatsCrop

Public reports about traffic, SEO and website characteristics.

<https://www.statscrop.com/>

ExpiredDomains

Find expired domains or domains pending deletion; a tool for domain trading and research.

<https://www.expireddomains.net/>

7. Finding and checking email addresses

These tools do not provide professional email accounts. They find contact information, check deliverability or assess email reputation.

Hunter.io

Find and verify professional email addresses associated with companies and domains.

<https://hunter.io/>

Reacher

An open-source email validation service and API for developers.

<https://reacher.email/>

Email Hippo

Validate email addresses and reduce invalid addresses and suspicious sign-ups.

<https://www.emailhippo.com/>

Melissa

Validate and improve contact data quality, including email and postal addresses.

<https://www.melissa.com/>

VoilaNorbert

Find and verify work email addresses using information about a person and their company.

<https://www.voilanorbert.com/>

FindEmails

Search and validate email addresses.

<https://www.findemails.com/>

EXPERTE Email Finder

Find professional email addresses using a name and company domain.

<https://www.experte.com/email-finder>

Anymail Finder

Find business email addresses with a deliverability checking process.

<https://anymailfinder.com/>

Tomba

Search and enrich business contact information and email addresses.

<https://tomba.io/>

Snov.io

Find and verify contact information and manage sales communications.

<https://snov.io/>

EmailRep

Check an email address's reputation and risk indicators for suspicious email analysis.

<https://emailrep.io/>

MailboxValidator

Validate email addresses through a web interface and API.

<https://www.mailboxvalidator.com/>

ContactOut

Find professional contact information; mainly a recruitment and sales tool.

<https://contactout.com/>

Email-format

Check companies' email naming patterns, such as name.surname@company.

<https://www.email-format.com/>

Emailable

Identified in the source report as the current destination of Verify-email.org; checks email lists and deliverability.

<https://emailable.com/>

Emailsearch.io

Search business contact information by name, company or domain.

<https://emailsearch.io/>

EmailSherlock

Reverse email lookup and related information; results are research leads, not proof of identity.

<https://www.emailsherlock.com/>

8. Image search and analysis

TinEye

Reverse image search to find published copies and other uses of the same photograph.

<https://tineye.com/>

Pixsy

Monitor photo usage and help pursue unauthorized use.

<https://www.pixsy.com/>

Jimpl

Display image metadata and EXIF, such as capture time and camera information.

<https://jimpl.com/>

EXIFdata

View, edit and remove EXIF; the source report mentions in-browser processing.

<https://www.exifdata.com/>

PimEyes

Search the web for similar facial images; visual similarity is not proof of identity.

<https://pimeyes.com/en>

FaceCheck

Search for similar facial photographs; insufficient for conclusive identity verification.

<https://facecheck.id/>

Pictriev

Facial similarity search, mainly for entertainment and comparison rather than reliable identity analysis.

<https://www.pictriev.com/>

Same Energy

Find images with a similar style and appearance; a visual inspiration tool.

<https://same.energy/>

Flickr

Publish and search photographs; a general image source rather than a specialist security tool.

<https://www.flickr.com/>

Pixabay

A visual content library with no direct role as a specialist security tool.

<https://pixabay.com/>

9. Phone numbers: accuracy and coverage limitations

These services do not guarantee identification of every number's owner or a person's live location.

Tellows

User reports and ratings for nuisance or suspicious phone numbers.

<https://www.tellows.com/>

Sync.me

Possible caller identification and phone number details based on the service's data.

<https://sync.me/>

NumLookup

Reverse phone lookup in collected data; quality depends on data coverage.

<https://www.numlookup.com/>

SpyDialer

Look up US phone numbers; not a global tool for identifying every number.

<https://spydialer.com/>

National Cellular Directory

A phone number and contact directory focused on the US market.

<https://www.nationalcellulardirectory.com/>

Phone Validator

Check line types, such as mobile or landline, and related information.

<https://www.phonevalidator.com/>

Free Carrier Lookup

Look up carriers and line types within the service's coverage.

<https://www.freecarrierlookup.com/>

ThisNumber

A guide to phone number resources and directories in different countries.

<https://www.thisnumber.com/>

ReversePhoneLookup

Search information associated with a number; results are not official evidence of line ownership.

<https://www.reversephonelookup.com/>

ValidNumber

Reverse phone lookup and possible caller information.

<https://validnumber.com/>

AnyWho

A directory of people and phone numbers, mainly for the United States.

<https://www.anywho.com/>

10. General search engines

These are not specialist security tools, but they help find documents, reports and public information.

Google

General web and image search.

<https://www.google.com/>

Bing

Microsoft's web and visual content search.

<https://www.bing.com/>

Yahoo Search

Yahoo's general search service.

<https://search.yahoo.com/>

Yandex

Search the web, images and other public content.

<https://yandex.com/>

Baidu

Search with a strong focus on Chinese-language content.

<https://www.baidu.com/>

You.com

Search services and web APIs for artificial intelligence applications.

<https://you.com/>

SearXNG

Open-source metasearch software that can be hosted on your own server.

<https://docs.searxng.org/>

DuckDuckGo

General search with a focus on privacy.

<https://duckduckgo.com/>

Swisscows

Search emphasizing privacy and content filtering.

<https://swisscows.com/en>

Naver

A portal and general search service focused on Korean-language content.

<https://www.naver.com/>

Brave Search

Brave's general search engine.

<https://search.brave.com/>

Yep

General search for users and machine applications.

<https://yep.com/>

Gibiru

A search service claiming a privacy focus; this list is not a privacy audit.

<https://gibiru.com/>

Kagi

Subscription search focused on an ad-free experience.

<https://kagi.com/>
